ANNALS OF ECONOMETRICS

FRONTIERS OF FINANCIAL ECONOMETRICS AND FINANCIAL ENGINEERING

edited by
Eric Ghysels and George Tauchen

Contents

Guest editorial
E. Ghysels and G. Tauchen, Frontiers of financial econometrics and financial engineering 1

Part I: Option pricing
Y. Aït-Sahalia and J. Duarte, Nonparametric option pricing under shape restrictions 9

R. Garcia, R. Luger and E. Renault, Empirical assessment of an intertemporal option pricing model with latent variables 49

O. Bondarenko, Estimation of risk-neutral densities using positive convolution approximation 85

Part II: Fixed income
R. Jagannathan, A. Kaplin and S. Sun, An evaluation of multi-factor CIR models using LIBOR, swap rates, and cap and swaption prices 113

D.-H. Ahn, R.F. Dittmar, A.R. Gallant and B. Gao, Purebred or hybrid?: Reproducing the volatility in term structure dynamics 147

Part III: Stochastic volatility and jumps
C.S. Jones, The dynamics of stochastic volatility: evidence from underlying and options markets 181

M. Chernov, A.R. Gallant, E. Ghysels and G. Tauchen, Alternative models for stock price dynamics 225

G. Chacko and L.M. Viceira, Spectral GMM estimation of continuous-time processes 259

F.M. Bandi and T.H. Nguyen, On the functional estimation of jump–diffusion models 293

Part IV: General asset pricing and portfolio allocation
M. Chernov, Empirical reverse engineering of the pricing kernel 329

M. Stutzer, Portfolio choice with endogenous utility: a large deviations approach 365

Part V: A financial economist's perspective
D.S. Bates, Empirical option pricing: a retrospection 387
